Experience

Development Specialist | Brigham Young University–Idaho

Jan 2026–Present

- Automated provisioning for approximately 375 online courses per semester with Google Apps Script (JavaScript), generating Trello setup and review workflows for 25 staff members.
- Developed React and C# features for an internal inventory and user-balance application with admin roles; collaborated with a senior developer on architecture, code review, and GitHub Actions/Nginx deployment.
- Built a responsive Canvas-integrated dashboard to help advisors track student enrollment and assignments; maintained shared Canvas and Trello API integrations to reduce repetitive configuration code.

Projects

VitalityVista | Fitness and Nutrition Web Application

May 2025–Present

React, TypeScript, Material UI, Deno, Oak, PostgreSQL, Vitest | [GitHub](#)

- Built responsive dashboards, workout planning, food and water logging, and progress charts; connected the React interface to authenticated APIs and PostgreSQL persistence.
- Integrated FatSecret food and recipe lookup, browser barcode scanning, and health-data imports with duplicate and conflict review.
- Added Vitest checks for camera startup, timeouts, cleanup, and import validation; corrected local-date handling across food logs and daily calorie summaries.

VibeMatch | Social Movie Discovery Application

Jun 2026

Next.js, React, TypeScript, Tailwind CSS, Supabase, TMDB, OMDb | [GitHub](#)

- Built a responsive movie-selection interface with animated swipe cards, drag and keyboard controls, preference filters, and movie-detail dialogs.
- Connected TMDB and OMDb APIs for movie information, ratings, and streaming availability; implemented authenticated sessions, saved selections, and shared-match results with Supabase.

Coaching Audits | Academic Coaching Web App

Jan 2026–Present

Google Apps Script, JavaScript, HTML, Tailwind CSS, Canvas API, GitHub Actions | [GitHub](#)

- Designed and deployed a Canvas-integrated academic coaching platform used by 70+ coaches to support 1,500+ students, unifying student dashboards, assignment audits, grade history, online activity, intervention records, and prioritized watch lists.
- Built server-side role controls and quota-aware roster, grade, and risk jobs using caching, batching, locks, saved checkpoints, and continuation triggers; automated production deployment through GitHub Actions and Apps Script.

Volunteer Experience

Volunteer Software Analyst | Madison Fire Department

Apr–Jul 2024

- Contributed to an inventory system for 200+ assets, replacing spreadsheets with centralized equipment records.
- Helped design the SQLite schema, status tracking, and replacement-alert workflow for 10+ personnel.
- Reviewed SQL scripts and GitHub pull requests with an Agile team to maintain database design standards.

Education

Brigham Young University–Idaho

Expected Dec 2026

B.S. Software Engineering, Minor in Data Science

Certificates: Full-Stack Web Development, Data Science

Technical Skills

Languages: JavaScript, TypeScript, HTML5, CSS3, C#, Python, SQL

Web and Data: React, Next.js, Node.js, Express.js, REST APIs, PostgreSQL, SQLite

Development and AI: Git, GitHub Actions, Vitest, Google Apps Script, Cursor, Claude Code, ChatGPT
